Yes, that might be a good approach. We'll discuss with Nicole, too, since she was the one who was really excited about it. I am OK with either of the approaches, it does break things up a little to run it, but the questions is how much of it people hear and what they get out of it.

I was thinking, when you give the briefing, when you get to the video of how a tire is made, you could give the option of watching during the briefing or not, and leave it up to them.

It is a good picture of [REDACTED] You took quite a few, they are all pretty great. The iPhone motion did not come through for that little extra animation. I wonder whether the motion is selective in any way (e.g., specific to objects in motion at the time the picture was taken, so you could potentially see water running if you took a photo of a faucet)?
